# Authentify Forensic Report

## 1. Scan summary

This report outlines the results of a deepfake analysis conducted on **4l1ucCpXBTR3U80z.mp4** using the Authentify engine. The engine analyzed **audio and video streams separately** to detect the presence of deepfake content. Authentify determined that the file's content has been manipulated. The report below provides detailed information about the identified manipulations.

|                                                                                              |                                                       |                                |
|----------------------------------------------------------------------------------------------|-------------------------------------------------------|--------------------------------|
| <b>Audio Stream:</b> Total tampered chunks: <b>5/16</b> , with avg. <b>confidence 60.00%</b> | <b>Video Stream:</b> <b>No manipulation detected.</b> | <b>File Size:</b> 8.04 MB      |
| <b>Model Version:</b> 0.9.13                                                                 | <b>Model Version:</b> 0.9.17                          | <b>Media Type:</b> video/mp4   |
|                                                                                              |                                                       | <b>Duration:</b> 1 min 51 secs |

## 2. Audio analysis

The audio stream was divided into 16 chunks, with 5 chunks detected as manipulated. Detailed chunk-level analysis is provided in the graphs and tables below.

### 2.1 Chunk distribution & histogram

### 2.2 Chunk-level confidence score

2.3 Spectrogram with audio waveform

The audio waveform (sampled at 16KHz) shows amplitude variations over time.

The Mel spectrogram, which visualizes the frequency content of the audio signal over time mapped onto a mel scale. The mel scale is a perceptually motivated scale that spaces frequencies logarithmically to align with human auditory perception, emphasizing lower frequencies where the human ear is more sensitive.

Waveform

Spectrogram

(An expert can use these plots to infer additional speaker characteristics)

2.4 Audio chunk distribution and AI engine source detection details

Authentify identified that Unknown, NA AI tools was utilized to generate the deepfake.

| Timestamp    | Manipulated (%) | Probable Sources |
|--------------|-----------------|------------------|
| 0.00-6.00s   | 5.00%           | Original         |
| 6.00-12.00s  | 4.00%           | Original         |
| 12.00-18.00s | 7.00%           | Original         |
| 18.00-24.00s | 5.00%           | Original         |
| 24.00-30.00s | 7.00%           | Original         |

### 3. Video analysis

The video stream was divided into 197 chunks, with 16 chunks detected as manipulated. Detailed chunk-level analysis is shown in the graphs and tables below.

#### 3.1 Chunk level manipulation analysis & histogram

#### 3.2 Chunk level confidence score

### 3.3 Video chunk distribution

(Shown suspicious facial markings in highlights, and marked uncertain faces with yellow outline.)

| Timestamp    | Manipulated (%) | Highlights                                                                        |

3.4 Saliency heatmaps

These images are facial attribution heatmaps, highlighting regions that contribute most to a model's decision (e.g. identity recognition or classification). Warmer colors (red/yellow) indicate higher importance, while cooler areas (blue) are less influential. Here, the model focuses strongly around the left eye and mouth region.

Face 1 · 92.27s · 100.0%

Face 2 · 94.40s · 100.0%

Face 3 · 89.60s · 99.9%
